

CALCULATING YOUR COMBINED GPA

As a transfer student you may either list the GPA from UNC and from your previous school separately, or you may combine your UNC and previous school GPA's.

If you choose to combine the GPA's, you must indicate on your resume that you have done so.

Below is the formula for calculating combined GPA:

(# of credit hours from previous college X GPA at previous college)

+

(# of credit hours completed so far at UNC X GPA at UNC) = SUM

SUM divided by total credit hours from both colleges = combined GPA

Example:

(30 credits X 3.45)

+

(30 credits X 3.12) = 103.5+93.6=197.1

197.1/60=3.28 combined GPA
